

SITHASSEMBLY // CONTROLLED REFERENCE

Network Intelligence Command Reference

The enabled, allowlisted local command surface for SithInsta casework.

EDITION	2026-09-06
STATUS	Current local executor reference
SOURCE	docs/COMMANDS.md
CONTROL	Repository-tracked English source

Local Command Console

The printable English reference is `Network-Intelligence-Command-Reference.pdf`. Signal Desk implements only the local, allowlisted commands below against its SQLite case database.

Available commands

- `/help [topic]`
- `/context`
- `/find posts --query <text> [--min-risk 45] [--limit 50]`
- `/find accounts --query <text>`
- `/find mentions @handle`
- `/find links [--domain example.org]`
- `/source add <URL> [--label "Title"]`
- `/profile show|history|connections @handle`
- `/profile activity|aliases @handle`
- `/profile compare @account_a @account_b`
- `/graph build|centrality|communities`
- `/graph common @account_a @account_b`
- `/graph path @account_a @account_b [--max-hops 4]`
- `/timeline build`
- `/timeline compare @account_a @account_b`
- `/case create "Title" [--description "Text"]`
- `/case status`
- `/case note "Text"`
- `/case tag "Label"`
- `/review queue`
- `/review approve|reject claim:<id>`
- `/confidence set relationship:<id> <0-1>`
- `/contradictions,/duplicates [--type profile|source],/gaps`
- `/agent status or /queue`
- `/history`
- `/report generate --format pdf`
- `/export case --format json|pdf`

Use `--case <id>` with a supported command to target a different local case. Each execution returns the normalized command, structured local data, evidence links, confidence where available, and suggested next commands.

Current local command set

The current local executor implements only the commands listed above. Other catalog entries currently return `not_available`; they can be added later through explicit, tested adapters and command handlers.
